

AQMetrics Risk Register

Manage your compliance risk with consistency and control.

What does the solution deliver?

- A streamlined risk register aligned with your firm's business operating model. Risks are input, assessed and reviewed in a **consistent** manner.
- A flexible risk workflow allows fully **controlled** risk management with flexible auditing.
- An **intuitive** risk dashboard provides insights into areas of risk concentration across your firm's business units.
- A powerful risk reporting tool with transparent reporting, ensuring alignment of risk **culture** and **code of conduct** across your firm.

The screenshot displays the AQMetrics Risk Register interface. On the left, a table lists various risks with columns for Risk Ref, Likelihood, Risk Rating, Company, Business Unit, Risk / Regulation Area, Risk Description, Impact, Status, and Last Updated by. A dropdown menu is open for the 'Risk Area / Regulation' column, showing options like AML, Short Selling, UCITS, etc. On the right, a 'Risk Details' panel provides a comprehensive view of a selected risk, including its description, source, and associated metrics. A callout box on the right highlights 'Consistency and Control Workflow and Audit Efficiency'.

Culture and conduct –
transparent reporting
and accountability

Why does your firm need a Risk Register?

Global regulations are increasingly requiring a **systematic approach for risk management**. Board-level awareness of critical risks and concentration of risks is mandated. Full accountability is required at operational, supervisory and board levels. Risk management must be auditable, transparent and provide independent assurance to a firm's board, its stakeholders and the regulatory authorities.

How easy is it to on-board data?

The AQMetrics Risk register can be **self-configured** using the Risk Administration screen or set up by the AQMetrics customer success team to match your business operating model. Existing risk register data can be auto-uploaded so that your firm is ready to use the risk register with minimal operational input.
